Hebron, Palestine

Basel Al-Jabari

Software Engineer

[Basel Al-Jabari](#)

[Basel-3mk](#)

Education

- **B.S.** in Computer Systems Engineering – Information Security, Palestine Polytechnic University. **GPA:** 91.4%. **Major GPA:** 92.2%.
- Honors in 5 out of 5 semesters.

Aug. 2023 – Jun. 2027 (Expected)

Skills

- **Programming languages:** C++.
- **Familiar with:** C#, HTML, Java, Python.
- **Tools:** Git, GitHub.
- **Core Competencies:** Algorithms, Competitive Programming, Data Structures, Object-Oriented Programming, and Relational Database Design.

Projects

- **Pipeline-Project:** Developed a MIPS Pipeline Simulator using C++ to simulate a 5-stage processor pipeline. The simulator handles data hazards using dependency detection, forwarding, stalling, and instruction reordering, and handles control hazards by simulating branch behavior and adjusting the executed instruction flow. The project also includes Python visualizations for pipeline execution and performance comparison.
- **Competitive-Programming:** Built and maintained a well-organized Competitive Programming repository using C++ that contains optimized implementations of algorithms, data structures, and training materials. The project supports both my personal contest preparation and my role as a Competitive Programming trainer and coach, helping students learn problem-solving topics through clean, reusable, and structured code templates. The repository includes topics such as Graph Theory, Range Queries, String Algorithms, and training resources, with a focus on writing efficient solutions and making the material easy to study, teach, and revise.

Competitions, Exercises, and Volunteer Experience

- **Expert** at **Codeforces**. Participated in several national Competitive Programming contests: **PCPC** (20th Place in 2024, 8th Place in 2025), qualified to **ACPC** (2025, Unable to attend due to VISA), **Hebron Code Jam** (3rd Place in 2025, 11th Place in 2026), and **IEEEExtreme** (2024, 2025). These contests enhanced my teamwork, time management, problem-solving under pressure, and Data Structures & Algorithms skills.
- Participated in **Google HashCode** (4th Place in 2026), where I optimized NP-Hard problems using advanced algorithms within time constraints.
- Served as a **Competitive Programming Coach** for **PPU Code Academy**. I trained **20+** students to start Competitive Programming with C++, **10+** reached the **intermediate** level with **Data Structures**, **10+** reached the **advanced** level with **Algorithms**, and about **7** qualified to **PCPC** (2025), **4** qualified to **ACPC** (2025). This improved my teaching, presentation, and communication skills.
